

# INDIA BEYOND 2020 CHALLENGES & OPPORTUNITIES

DIGITAL CONFERENCE

## S. AMAR PRASAD REDDY

Vice Chairman, National Cyber Safety  
and Security Standards & Chairman,  
Youth Development Consortium (YDC).

## HEALTH CARE MANAGEMENT

**Dr. Amar Prasad Reddy** points out that “we all speak so many things but we are still dependent on foreign technology”. Hence he suggests that we have to develop more products rather than providing service to the foreign countries. He continues “more than 50% of our population is the youth and they focus on two things employment and employment and that is the problem here. The entire country, the mindset of any society, any religion or any community, the parents always insist kids to go for employment. No parents ask their kids to start an entrepreneurship or to build a business empire. They often want to put their kid to some software company or some manufacturing company just aiming at a piece of salary.” According to Dr. Reddy the entire mindset needs to be changed. Again, talking about the field of entrepreneurship, Dr. Reddy states that a lot of opportunities are being given by the Government of India. For example, loans like CG TMSE are given.

# INDIA BEYOND 2020 CHALLENGES & OPPORTUNITIES

## HEALTH CARE MANAGEMENT

Dr. Reddy said that “we have to create a bench mark to get into a professional education especially in engineering. In our country one thing is very important that is the youth have to focus more on politics, more on entrepreneurship. People who can think really out of the box, they should always think of innovation, entrepreneurship, politics and they should really dedicate themselves to the country. In the present situation of Covid 19, we can see lot of struggle poor people are facing, lots of migrant workers are struggling.

But presently we have done whatever best can be done from The Government of India and we are just doing the follow-ups too. Another most important thing is that PPEs (Personal Protection Equipments), available in India is 100% 'swadesi' ie purely Indian made. And we have the capacity; only thing is that we have to motivate our youth. We need to engage youth into innovation activities and secondly we need to engage them in practical studies. Skill Development is also one of the most essential parts. We need to bring integrated education curriculum. After this Covid19 we are going to face few issues like Unemployment and Hunger.”

And he concludes with these words “Integrated healthcare practice is what is required in India. And we can definitely come out of this situation. We should activate all the youth towards the nation”.
